NOMA TEC®

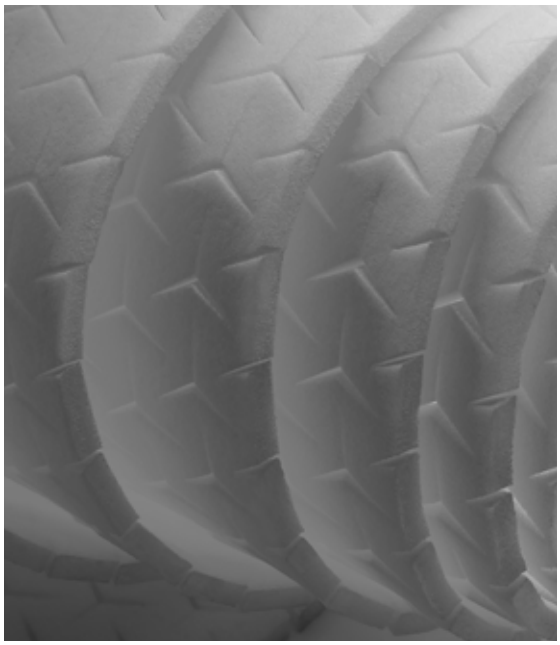
SHOCK PADS FOR TURF SYSTEMS

nmc SOLUTIONS FOR INDUSTRIES

NOMATEC®
SHOCK PADS

NMC has extensive experience of professional sports for a wide range of applications such as gymnastics, martial arts, and shock pads for artificial turf systems. Our references include Olympic and World Championship events.

NOMATEC® shock pads are manufactured of cross-linked polyolefin foam with closed cells to ensure low water absorption and good resistance to fluids. NOMATEC® shock pads are elastic and durable. A good shock pad improves the performance of the artificial turf system and decreases the amount and type of infill. The shock pad keeps its dimensional stability thanks to excellent recovery properties and retention of mechanical characteristics, guaranteeing a long and consistent performance even over large surfaces. NOMATEC® shock pads are easy and quick to install.



NMC, as a manufacturer of cross-linked polyolefin foams, and in close cooperation with a wide range of professionals and experts, we can develop shock pad which performs according to your needs for a wide variety of applications such as soccer, hockey, rugby, tennis, baseball, golf, playgrounds and landscaping.

NMC has in its product range shock pads which are certified in accordance with EN 15330-4:2022, which is a specification for shock pads used with synthetic turf, needle-punch and textile sport surfaces.

Sustainable and customized product solutions are also available.

Partnerships are in place with official institutes for evaluating the shock pads. NMC Termonova Oy is a full member in ESTC (European Synthetic Turf Council), as well as ISO 9001 and 14001 in addition to ISCC+ certified.
